

## EduStat Software

---

### *Training sessions*

The EduStat software is available in four versions to meet specific needs:

- "Items Bank" version
- "Sampling" version
- "Statistics" version
- "Full" version

Regardless of the used version, EduStat includes a set of documents presenting the different data processing options. It is possible to consult them and to acquire the skills allowing an optimal use of the software. Micro Center Pythagore offers the possibility of conducting training sessions tailored to the needs of EduStat users. Given the type of data processing used, it is thus possible to propose a personalized training program.

Training modules are available. Each one allows to explore one option of data processing or the production of statistical compilations. According to the needs expressed by the users of the software, a tailor-made training program can be offered. The following table provides a list of modules that can be part of a training program.

Number	Identification	Time	Prerequisites
1	First contact	1 day	None
2	Preparing databases	1 day	None
3	Statistical Compilations	2 days	Note # 1
4	Reporting	1 day	Module 1
5	Use of items banks	3 heures	Note # 2
6	Creating item banks	1 day	Module 1
7	Data Entry	1 day	None
8	Overview of Data Processing Utilities	1 day	None
9	Preparing macro commands	1 day	Note # 3
10	Sampling	1 day	Note # 4
11	Multilingual databases	1 day	Module 1

**Note # 1:** There will be use of available databases; strictly speaking, it would not be necessary to prepare databases adapted to the types of statistical compilation.

**Note # 2:** There will be available some items banks; Strictly speaking, it would not be necessary to prepare the items banks; another module deals with the preparation of the items banks.

**Note # 3:** We should have followed module 3 and ideally module 2. We will use databases prepared by Micro Centre Pythagore.

**Note # 4:** There will be use of available databases; ideally, module 2 should have been followed. Module 3 summarizes the sampling approach; if this module has not been presented, the exercises related to the selection of samples presented in module 3 should be carried out.

Please contact Micro Centre Pythagore for additional information and to express your training needs to set up and administer learning assessments. Here is the email address of this consulting firm:
